USING THE JOYNER OFF-CENTER JIG

Links and Resources:

- The Joyner Off-center Jig I am demonstrating came from Ruth Niles' web site, an earlier version of this:
Link: <https://nilesbottlestoppers.com/product/joyner-off-set-complete-kit/>
 - The #2MT Mandrel: <https://nilesbottlestoppers.com/product/off-set-jig-mandrel/>
- Instructions on how to use it: <https://nilesbottlestoppers.com/wp-content/uploads/2016/07/Basic-Instructions-for-Joyner-Off.pdf>
- Another set of instructions (downloadable PDF):
https://www.peaceriverwoodturners.org/resources/Documents/JIGS/pendant_jig_software_instructions.pdf
- Online link to Excel Spreadsheet "Pendant Jig Spreadsheet":
<https://www.turningwood.com/docs/PJPToolv4.0.xls>
- The double-sided carpet tape at Ace Hardware stores seems to work well, to hold work.

Steps:

1. Turn and set up the waste block face plate.
2. Screw the faceplate onto the jig faceplate.
3. Assemble the rest of the jig, centering and zeroing the faceplate.
4. Turn the faceplate round and flat on the outer face surface. Sand it.
5. Put 2-sided tape (or hot glue) on the face plate, and stick your medallion (or other piece) to it.
6. Use the spreadsheet to determine how to configure the jig, make the cuts.
7. I recommend that if you experiment and find a pattern that works well – record that pattern in the spreadsheet format and save it. This allows you to repeat it in the future.
