17:01:50 From Matt Harber - DAW - Highland, MI - Goblets!:  
Flat scraping versus sheer cutting ...

17:02:12 From SueB - Cape May, NJ:  
I don't quite get what makes it tricky? It seems to handle like a carbide (imo)

17:02:12 From Matt Harber - DAW - Highland, MI - Goblets!:  
Both the hook and ring are shearing.

17:02:36 From dewey:  
Where to obtain the ring cutter?

17:02:40 From Matt Harber - DAW - Highland, MI - Goblets!:  
The tools are shear CUTTING. When you angle a scraper, you can shear, but it's a shear SCRAPE>

17:03:00 From Matt Harber - DAW - Highland, MI - Goblets!:  
You can buy them from craft supplies and woodcraft. And Amazon.

17:03:06 From Tim Hatch Bastrop, TX:  
So he is using both sides to cut with the ring... the top part when he is deeper on end grain and the smaller end as he is coming up on side grain... Interesting

17:03:20 From Joaquin Juatai - Thomasville, NC:  
Replying to "I don't quite get wh..."

Like a carbide, the increased contact area with the cutting edge and the wood can cause gouging catches. It comes down to learning to ride the bevel of the ring.
