Hard to know.... I'd check your bearings to make sure they are rolling freely. See if you can isolate where and why it's bogging down. Try a small piece of wood, too.

i don't think weve seen gold leafing before

17:06:34 From Doug Miller in Kentucky to Everyone:
Replying to "QQ: It doesn't dry too much while you are turning...":
Billy, it shouldn't. Gilding size usually suggests that it dry for 30 minutes to an hour before applying the metal leaf.

17:06:39 From Bob Grinstead - Mansfield, Texas to Everyone:
Replying to "QQ: It doesn't dry too much while you are turning...":
he said it takes about a hour to dry, so I guess not

17:08:10 From Matt Harber - DAW - Highland, MI - Goblets! to Everyone:
Replying to "i don't think weve seen gold leafing before":
The "size" or "sizing" adhesive can take anywhere from 15 minutes to an hour to get to the tacky state where you can apply the leafing or dust.
