The dryness of the wood

18:14:37 From Ruby Cler:
Al, if you rough turn a piece to an even wall thickness then let it dry a year per inch it usually doesn't crack. It depends too on the type of wood . Fruit woods tend to crack easily

18:15:54 From Dane Chandler - DFA - Tucson:
rule of thumb: less than 5/16" and super consistency.

Another stupid question: I am trying something new, segmented bowls. Question; is there a clever method to flatten the layers a bit faster if you do not have a drum sander? I am considering using a router jig, but, that is probably overkill for getting things generally level and it will still ends up needing some general sanding.
